

7.1.4 Water conservation facilities available in the Institution:

1. Rainwater harvesting
2. Bore well /Open well recharge
3. Construction of tanks and bunds
4. Wastewater recycling
5. Maintenance of water bodies and distribution system in the campus

1. Rainwater harvesting:

The surface runoff from large area of the college campus and rooftops is collected through the open drains and pipes which finally lead into the farm pond. It is used for irrigation and open well recharge.

2. Bore well/Open well recharge:

The institution has an open well and bore-well that are recharge through farm ponds.

3. Construction of tanks and bunds:

The institution has constructed two farm ponds. In the rainy season, they are recharged from the rainwater of the campus collected into it.

5. Maintenance of water bodies and distribution system in the campus

Water bodies are maintained by regular cleaning and de-silting process. Water is distributed through a network of pipeline.
